

1. AI Engineer – Junior

Experience: 0–2 years

Key Responsibilities:

- Assist in developing AI/ML models for various applications.
- Participate in data preprocessing, feature engineering, and exploratory data analysis.
- Support testing, validation, and deployment of AI models.
- Collaborate with senior engineers to implement AI solutions in real-world scenarios.
- Keep up-to-date with latest AI/ML research and tools.

Detailed Requirements:

- Bachelor's degree in Computer Science, AI, Data Science, or related fields.
- Strong programming skills in Python, including libraries such as NumPy, Pandas, scikit-learn.
- Basic familiarity with deep learning frameworks like TensorFlow or PyTorch.
- Understanding of ML concepts like supervised/unsupervised learning, regression, classification.
- Basic knowledge of data structures, algorithms, and software development principles.
- Ability to read and interpret research papers or technical documentation.
- Strong problem-solving, analytical thinking, and eagerness to learn.
